

Our Approach to Software Development

The team at Khronos applies principles of Disciplined Agile Delivery (DAD) in our approach to software development. DAD is a people-first, learning-oriented hybrid agile approach to IT solution delivery. It has a risk-value delivery lifecycle, is goal-driven, is enterprise aware, and is scalable. We will conduct a short inception phase to get our team going in the right direction. During this phase, we will clear up any confusion surrounding project needs through a brief Q & A, perform initial requirements modeling, architecture modeling, planning, and other organizational activities. Upon completion of inception, we will begin work on your project in 1-2-week sprints. The overall extent of the project is your choice. We will consistently deliver a product of value and will scale the project as needed to satisfy your needs.
